

PASSION TO INNOVATE | POWER TO CHANGE

Medical Science Liaison: General Medicine

YOUR TASKS AND RESPONSIBILITIES

The MSL shall act as a scientific expert between Bayer and the medical community through the dissemination and education of scientific data and material. The MSL establishes long-term scientific/strategic relationships with key, influential physicians/scientists/stakeholders and with related major medical associations and academic centers of excellence.

Primary responsibilities:

- Exchange and dissemination of scientific, educational, and research related information: The MSL plans, partners and engages with TLs as a subject matter expert and communicates both proactively and reactively via various innovative TL engagements tactics and formats to provide dissemination, clarification and education of scientific data, study protocols, meeting abstracts, and professional literature
- TL Identification / profiling / segmentation and strategy and engagement planning: In alignment with medical strategy as stipulated in the integrated brand plan.
- Participation at / networking in Congresses and Conventions: The MSL uses congresses and conventions to network with TLs, establish new contacts, and gather competitive intelligence.
- Coordination of Scientific Education Activities and Advisory Boards: The MSL plans and organizes scientific training, education events / sessions and advisory boards with TLs within their specific therapeutic area.
- Preparing reports and tracking activities: The MSL submits timely reports of field interactions and events, as well as tracks activities against agreed upon PMP objectives and country medical activity plan.
- Collecting Investigator Initiated Research (IIR) ideas and facilitating IIR set-up
